Locus Robotics to Demonstrate Fast Picking at MODEX 2016

New York, NY – March 10, 2016 – Massachusetts-based warehouse automation company Locus Robotics (www.locusrobotics.com) has announced that it will demonstrate its new, innovative order fulfillment solution at the MODEX 2016 tradeshow in Atlanta, GA from April 4 – 7 at booth #4670.

Locus Robotics will present the unique concepts and technology that will allow operations to pick orders faster. The collaborative process, where humans and LocusBots™ work side by side in the same space, is characterized by a 5-8 times improvement in user productivity, an ability to support different types of operations ranging from eCommerce to wholesale to store replenishment, and an approach that uses existing infrastructure to drive down solution cost and speed time to deployment.

“This will be Locus Robotics’ first public event,” said CEO and co-founder Bruce Welty. “We look forward to demonstrating to attendees how our innovations dramatically and simply increase productivity without sacrificing operational flexibility.”

ABOUT LOCUS ROBOTICS

Building on years of direct warehouse operations experience and deep firsthand knowledge of warehouse robotics, Locus has engineered a new approach to mission critical fulfillment operations. The Locus platform delivers greater throughput, reduced costs and unparalleled flexibility in moving inventory and orders through a fulfillment center. This efficiency and flexibility in turn allow operators to keep up with the increasingly complex demands of channel partners and consumers. Simply pick faster.
